Corrections made in POE:

TASK 1:

- I changed the UI design of this task and made it to look like the rest of the other tasks in this POE.
- I connected the website to the database to ensure that the data that is required to be displayed is seen and also added when the website is deployed.
- Only the admin is allowed to login in to the system and also add a new user via the admin panel to give them access to the website.

TASK 2:

- Not a lot of changes need to be made in this part, because i submitted it in the wrong place which it resulted to it nor being marked.

TASK 3:

- I added this to the Azure repository.
- Redid the testing.
